Objective:

I want to obtain a responsible and challenging position with a progressive company where my talent and ability will have valuable application and utilization of my opportunity for advancement of the firm.

Main Responsibilities:

- Assessed software bugs and compiled findings along with resolution techniques in documentation to disseminate to Development team.
- Effectively interacted with Development and Business Analysis departments regarding software defects, working closely to develop innovative solutions.
- Conducted regression testing, analyzed results and submitted observations to development team.
- Created accurate and efficient test scripts to manage automated testing of certain products and features.
- Operated under Agile and Scrum frameworks to complete releases every week and well-organized sprints.
- Wrote and optimized test cases to maximize success of manual software testing with consistent, thorough approaches.
- Monitored debugging process results and investigated causes of non-conforming software.
- Reviewed requirements, specifications and technical design documents to provide timely and meaningful feedback.
- Planned and devised cohesive test plans for projects.
- Increased and improved knowledge of software and tools by engaging in all available trainings and seminars.
